

Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur
Bachelor of Technology in Information Technology

Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur 440033

Scheme and Syllabus for
Bachelor of Technology (Information Technology)

Submitted by
Board of Studies in CSE/CT/IT/CE

Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur

Bachelor of Technology in Information Technology

Vision:

To nurture the students with current technology, research and ethics to become a prolific contributor having a great perspective to meet the developing needs of IT industry and society.

Mission:

- To empower the emerging graduates with high quality technical and value-based education.
- To attain professional excellence in the field of Information Technology and related areas.
- To encourage learners to carry research activities for addressing the social needs of the society.

Program Educational Objectives

An Information Technology Graduate able to

- Apply his core competency to identify, formulate, analyze, design & implement the IT related problems with their sustainable solutions and contribute in the profession with elevated ethics.
- Solve problems of social relevance applying the knowledge of IT and pursue higher education and research.
- Work effectively as Individual and Team member in multidisciplinary projects.
- Engage in lifelong learning career enhancement and adopt to changing professional and societal needs.

PROGRAM SPECIFIC OUTCOMES :(PSOs)

- An ability to apply mathematical foundations, algorithmic principles and computer science theory in the modeling and design of software systems of varying complexity.
- An ability to work with Open-Source Software and use off the shelf utilities for program integration.

Program Outcomes

PO1: Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate and analyze hardware and software engineering problems and arrive at substantiated conclusions using first principles of mathematics, natural and engineering sciences.

PO3. Design/Development of solutions: Design and develop hardware / software system to meet desired needs within realistic constraints related to economic, environmental, social, political, ethical, health and safety, verifiability, and sustainability concerns.

PO4. Conduct investigations of complex problems: Use research-based knowledge including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.

Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur

Bachelor of Technology in Information Technology

PO5. Modern tool usage: Use techniques, skills, and modern computer engineering tools, including simulation and modeling, for addressing the needs of engineering profession and interdisciplinary business.

PO6. The engineer and society: Understand the computing needs of inter-disciplinary scientific and engineering disciplines and design and develop algorithms and techniques for societal, health, safety, legal and cultural problems.

PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and team work: Function as member or leader of team and to understand engineering management principles & finance to manage projects in multidisciplinary environment.

PO10. Communications:

Effectively transfer technology to engineering community and society at large on broadly defined engineering needs through technical reports, presentations and software technologies.

PO11. Project management and finance:

Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team. Manage projects in multidisciplinary environments.

PO12. Life-long learning: Engage in lifelong learning and adapt to rapid changes in computer science & allied areas.

First Semester B. Tech. (Computer Science & Engineering/ Computer Engineering/ Information Technology/ Computer Technology)

Essentials of Chemistry (TH+P)	
Total Credits: 02 T + 01 P	Subject Code: BIT1T01
Teaching Scheme:	Examination Scheme:
Lectures: 2 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives	
1	To introduce ideas of electrochemistry necessary to understand the function of batteries.
2	To gain an understanding of the rare earth metals and waste handling generated out of their uses.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Students will be able to utilize the basics concepts of battery technology & energy storage devices.
2	Students will learn about rare earth elements, the correct disposal methods of e-wastes and while creating any tool they will keep this environmental aspect in mind.
3	They will know the role of nanomaterials and their applications.
4	Students will inculcate the use of instrumentation techniques and interpret its applications in material characterization.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT 1: Battery Technology			
Electrochemical & Galvanic Series, Electrochemical & Electrolytic cells Battery: Introduction, types-primary, secondary and reserve, Lithium-cobalt oxide and metal air batteries - characteristics, components/materials, working and applications. Super capacitors: Introduction, types (EDLC, pseudo and asymmetric capacitor) with examples and applications. Energy conversion devices: Introduction, characteristics, materials, working and applications of H ₂ -O ₂ fuel cells, amorphous Si and quantum dye sensitized solar cells.	6		1
UNIT 2: Rare earth elements and E-wastes management			

Rare earth elements: Properties, applications in electronics. Lanthanide contraction. Types of E-wastes, environmental and health risks, segregation and recycling (Hydrometallurgical, pyrometallurgical and direct recycling), Extraction of rare earth and precious metals from e-wastes, Twelve principles of Green Chemistry. Green Computing, Role of Green Computing in Environment and Research, Green devices and Green data Servers.	6		2
UNIT 3: Nanomaterial's			
Introduction, classification, size dependent properties, surface area, optical and catalytic properties, Synthesis methods of nanomaterials- Top down and bottom-up approach. Carbon nanomaterials: Types, properties and applications of CNT and graphene. Applications of nano materials.	6		3
UNIT 4: Material Characterization Techniques			
Principles and applications of – Electronic Spectroscopy (Beer-Lambert's law and its numerical), Infra-Red spectroscopy and Nuclear Magnetic Resonance spectroscopy. Thermal analysis (Thermogravimetry, Differential Thermal Analysis, Differential Scanning Calorimetry), Scanning Electron Microscopy, Transmission Electron Microscopy, Atomic Force Microscopy, Brunauer-Emmett-Teller (BET) surface area analysis, X-ray Diffraction Analysis, particle size analyser (Dynamic Light Scattering), High Performance Liquid Chromatography and Gas Chromatography	6		4

Essentials of Chemistry Lab			
Course Code:	BIT1P01	Credits:	01
Teaching Hours / Week	02 P	SEE	25 M
Total number of teaching hours	24	Course Category	BSC
BoS	AS&H		

Credits: 01

Marks: 50

List of Practical (Any 6-performance based and 1 virtual lab experiment)

1. Estimation of Copper estimation (iodometrically)
2. Estimation of Ni by complexometry / gravimetry.
3. Fe(II)/ (III) estimation by redox titration.
4. Beer's Law verification by spectrophotometer.
5. Separation of copper nickel ions by paper chromatography.
6. Redox titration by potentiometry
7. Acid base titration by potentiometry
8. Acid base titration by conductometry
9. Virtual Lab: Experiment on Chromatography
10. Virtual Lab: Experiment on Spectroscopy

Applied Algebra	
Total Credits: 03T	Subject Code: BIT1T02
Teaching Scheme:	Examination Scheme:
Lectures: 2 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives	
1	The aim of this course is to acquaint aspiring engineers with methods in differential, integral, and linear algebra.
2	It seeks to provide students with common concepts and resources that will enable them to manage mathematics and its applications with ease and become proficient in their field.

Course Outcomes	
After completion of syllabus, students would be able to	
1	To apply knowledge of matrices and linear algebra in a comprehensive manner
2	To exhibit knowledge of the fundamental concepts of linear algebra, such as inner product space, bases and dimensions, vector space, subspace, linear transformations, and inner product space.
3	To solve engineering problem by using knowledge of differentiation.
4	To analyze length, area, volume using knowledge of curve tracing.
5	To evaluate series and sequences based on their convergence and type.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I: Linear Algebra I			
Linear dependence of vectors, Eigen values and Eigen vectors, Reduction to diagonal form, Largest Eigen value and its corresponding Eigen vector by iteration method, Gaussian elimination, LU Decomposition (Crout's method).	7		1
UNIT II: Linear Algebra II			
Vector Space; Subspaces; Basis; Dimension; Linear transformation; Range Space and Rank; Null Space and Nullity; Rank nullity theorem, Matrix Representation of a linear transformation; Inner Product Spaces: Norm; Orthonormal Sets, Positive definite matrices, Singular Value Decomposition, Gram-Schmidt process.	7		2
UNIT III : Differential Calculus			
Successive differentiation: Leibnitz's Rule, Taylor's and Maclaurin's series for function of one variable, Indeterminate forms and L'Hospital's Rule, Maxima and Minima for function of one variable, continuity of functions; differentiability, Rolle's theorem, Mean value theorem.	7		3

UNIT IV : Integral Calculus			
Beta and Gamma functions and their properties. Curve Tracing: Tracing of curves (Cartesian), Applications of definite integrals to find length of the curve, area, volume & surface area of revolution.	8		4
UNIT V: Sequence and Series	7		5
Sequence, types of sequence, test of convergence of sequences, Cauchy sequence, infinite series, power series, Alternating series, tests of convergence and absolute convergence of series.

Lectures: 3 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives	
1	Design solutions to simple engineering problem by applying the basic programming principles of C language and basic mathematical knowledge.
2	Develop simple C programs to illustrate the applications of different data types such as arrays, pointers, functions.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Illustrate and explain the basic computer concepts and programming principles of C language.
2	Develop C programs to solve simple mathematical and decision-making problems.
3	Develop C programs to solve simple engineering problems using looping constructs.
4	Develop C programs to demonstrate the applications of derived data types such as arrays, pointers, strings and functions.
5	Use and create functions for modular programming

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I:			
UNIT I: Introduction to Programming: Importance of C, Basic Structure of C Programs, Programming Style, Executing a C Program. Constants, Variables, and Data Types: Introduction, Character Set, C Tokens, Keyword and Identifiers, Constants, Variables, Data Types, Declaration of Variables, Assigning Values to Variables, Defining Symbolic Constants Managing Input and Output Operations: Reading a Character, Writing a Character, Formatted Input, Formatted Output. Operators and Expressions: Introduction, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Increment and Decrement Operators, Conditional Operator, Bitwise Operators, Special Operators, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic Operators, Type Conversions in Expressions, Operator Precedence and Associativity.	7		1
UNIT II:			

Decision Making and Branching: Introduction, Decision Making with IF Statement, Simple IF Statement, the IF....ELSE Statement, Nesting of IF....ELSE Statements, The ELSE IF Ladder, The Switch statement. Decision Making and Looping: The WHILE Statement, The DO Statement, the FOR Statement, Jumps in LOOPS.	7		2
UNIT III:			
Arrays: One-dimensional Arrays , Declaration of One-dimensional Arrays, Initialization of One-dimensional Arrays, Example programs- Linear search, Binary search, Bubble sort, Selection sort. Two-dimensional Arrays , Declaration of Two-dimensional Arrays, Initialization of Two-dimensional Arrays, Example programs – Matrix Multiplication, Transpose of a matrix.	7		3
UNIT IV:			
Character Arrays and Strings: Declaring and Initializing String Variables, Reading Strings from Terminal, Writing Strings to Screen, Arithmetic Operations on Characters, String-handling Functions (strlen(), strcpy(), strcmp(), strcat(), strrev()), Example Programs(with and without using built-in string functions), Two-dimensional character arrays. Pointers: Introduction, Declaring Pointer Variables, Initialization of Pointer variables, accessing a Variable through its Pointer, Pointer Expressions, Pointer Increments and Scale Factor, Pointers and 1-D Arrays.	8		4
UNIT V :	7		5
User-defined Functions: Elements of User-defined Functions, Definition of Functions, Return Values and their Types, Function Calls, Function Declaration, Category of Functions, No Arguments and no Return Values, Arguments but no Return values, Arguments with Return Values, No Arguments but Returns a Value, Passing Arrays to Functions. Recursion - Factorial of an integer, Xn, Finding nth Fibonacci numbers.

3.	Kerningham Dennis Ritchie	The C programming language (ANSI C version), 2 nd Edition, PHI India
4.	Jeri R Hanly Elliot B Koffman	Problem solving and program design in C Person Addison Wesley 2006
5	Yashwant Kanetkar	Letus C, 6 th Edition, BPB publication

URL:

1. <https://www.w3schools.com/c/>
2. <https://www.tutorialspoint.com/cprogramming/index.htm>
3. <https://www.geeksforgeeks.org/c-programming-language/>

Total Credits: 01	Subject Code: BIT1P03
Teaching Scheme:	Examination Scheme:
Lectures: 2 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 25 Marks
Practical: 02 Hours/Week	University Assessment: 25 Marks

Course objectives:

1. Understand the basic principles of C programming language.
2. Develop C programming skills.
3. Develop debugging skills using CodeBlocks IDE.

Course outcomes:

After the completion of this course, students will be able to:

- CO1:** Develop, Debug and Execute programs to demonstrate decision making and looping constructs in C.
CO2: Develop, Debug and Execute programs to demonstrate the applications of arrays in C.
CO3: Develop, Debug and Execute programs to demonstrate the applications of functions in C.
CO4: Develop, Debug and Execute programs to demonstrate the basic concepts of pointers in C.

Conduction:

The laboratory programs should be executed on CodeBlocks IDE using GCC Compiler. (Select any 10 Experiments)

SYLLABUS

Laboratory Programs:

1. Develop a C Program to find the roots of quadratic equation for non-zero co-efficient using if-else ladder construct.
3. Develop a C Program to conduct Binary search for a key element over an array of n integer elements. Report success or failure with appropriate messages.
5. Develop a C Program to implement a simple calculator to perform addition, subtraction, multiplication and division operations using switch construct. Display appropriate messages for invalid operator and divide by zero error.
8. Develop a C program to read n elements into an integer array and sort the array using Bubble sort technique. Print the input array and the resultant array with suitable messages.
10. Develop a C Program to generate the Prime numbers between the ranges m & n using nested for loop construct. Also, print the number of prime numbers generated.
12. Develop a recursive C function to find the factorial of a number, n! , defined by fact(n)=1, if n=0. Otherwise fact(n)=n*fact(n-1). Using this function, develop a C program to compute the Binomial coefficient nCr. Perform input validation as well.
15. Develop a C Program to find the GCD & LCM of two integers using Euclid's algorithm.
16. Develop a C program to find the smallest and largest elements in an array using pointers and then swap these elements and display the resultant array.
18. Develop a C program to find the Sine of an angle for the given n terms using the series $\sin(x) = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \dots$ n terms.
20. Develop a C program to read two matrices A (m x n) and B (p x q) and compute the product of the two matrices. Print both the input matrices and resultant matrix with suitable headings and output should be in matrix format only. Program must check the compatibility of orders of the matrices for multiplication. Report appropriate message in case of incompatibility.
- . Develop a C program to find the sum of all the elements of an integer array using pointers.

24. . Develop a C program to accept a matrix of order $m \times n$. Implement the following functions:
- i) Find the sum of each row
 - ii) Find the sum of each column
 - iii) The sum should be printed in main function only.
25. Develop a C program to count the vowels & consonants in a given string.
26. Develop a C program to perform the following operations using functions:
27. Read n elements into an array
- i) ii) Print the contents of an array
28. Sort an array of n elements using Selection sort technique

Basics of Electronics Engineering	
Total Credits: 03 T	Subject Code: BIT1T04
Teaching Scheme:	Examination Scheme:
Lectures: 3 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives	
1	To make students understand about Semiconductor devices & its applications, Digital gates, flip-flops, counter and design of simple digital circuit, Microcontroller & its applications.
2	Introduce embedded system and IoT, Analog, digital communication and wireless communication

Course Outcomes	
After completion of syllabus, students would be able to	
1	Explain the working of semiconductor devices
2	Select best circuit for the given specifications/application.
3	Analyse, design and implement Combinational and Sequential Circuits.
4	Select sensors for specific applications. To design and implement Microcontroller based systems.
5	To understand the fundamental concepts of electronic communication and their use in computer applications.

SYLLABUS

Details of Topic	Allotment of Hours	Mapped with CO Number	
	L	T/A	CO
UNIT I : Introduction to Electronic components and Analog Electronics			
Importance of Electronics in Computer Science and engineering, voltage, Current, and Resistance, Passive Components (Resistors, Capacitors, Inductors), Active Components (Diodes, Transistors), Operational Amplifiers (Op-Amps), Amplifiers and Oscillators. Simple op-amp applications	7		1
UNIT II : Digital Logic and Circuits			
. Binary Number System, Logic Gates (AND, OR, NOT, XOR), Combinational Circuits, Sequential Circuits, Flip-Flops (RS and J-K) and Registers, truth table, Half Adder and Full Adder, Multiplexer and decoder, Shift registers, Building Simple Digital Circuits (Basic synchronous counter design)	7		2
UNIT III : Introduction to Microcontrollers			
Introduction to Microcontrollers, Arduino Platform, Interfacing Electronics with Microcontrollers, Analog-to-Digital and Digital-to-Analog Conversion, Types of Sensors (Temperature, Light, Proximity, etc.)	7		3
UNIT IV : Introduction to Embedded system and IoT			

Introduction to embedded system and types, Sensor Interfacing, Actuators (Motors, LEDs, Relays), Practical Applications, Building Simple microcontroller and Embedded Systems, Introduction to IoT system and its architecture, Design of simple IoT system	8		4
UNIT V : Introduction to Communication Systems			
Introduction to Communication Systems, Analog and Digital Communication, Serial and Parallel Communication, Wireless Communication, Wireless Network Topologies, Networking Basics, Building Simple Communication Systems, Cellular Wireless Networks - Introduction, Cellular system, cellular concept and frequency reuse. Wireless Network Topologies – Fourth Generation (4G) Technology and introduction to 5G , CDMA Technology, Wireless LAN, Introduction to Bluetooth technology	7		5

Basics of Electronics Engineering	
Total Credits: 01	Subject Code: BIT1P04
Teaching Scheme:	Examination Scheme:
Lectures 0 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 50 Marks
Practical: 02 Hours/Week	University Assessment: ---

Practical based on above syllabus

Web Design Technology (P)	
Total Credits: 02 P	Subject Code: BVS1P01
Teaching Scheme:	Examination Scheme:
Lectures: 0 Hours/Week	Duration of University Exam:
Tutorials: 0 Hours/Week	College Assessment: 50 Marks
Practical: 04 Hours/Week	University Assessment: 50 Marks

Course Objectives	
1	Students will learn how to create visually appealing and user-friendly websites using a combination of HTML, CSS, and other web technologies.
2	Topics include web development tools, responsive design, accessibility, and best practices for creating modern websites.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Understand the fundamentals of Internet, and the principles of web design.
2	Construct basic websites using HTML and Cascading Style Sheets.
3	Build dynamic web pages with validation using Java Script objects and by applying different event handling mechanisms.
4	Develop modern interactive web applications and deploy.

Course Outcomes: After Completing this course students will be able to

1. **HTML (Hypertext Markup Language)**

- Basic HTML Structure
- Text Formatting and Semantic Elements
- Lists and Links
- Forms and Input Elements

2. **CSS (Cascading Style Sheets)**

- Introduction to CSS
- Selectors and Properties
- Layout and Positioning
- CSS Box Model

3. **Responsive Web Design**

- Media Queries
- Fluid Layouts
- Flexbox and Grid Layout

- Mobile-First Design

4 : Web Typography

- Font Families and Styles
- Web Fonts and Icons
- Typography Best Practices

5 : Images and Multimedia

- Image Formats and Optimization
- Working with Images in HTML and CSS
- Embedding Audio and Video

6 : Web Accessibility

- Accessibility Principles and Guidelines
- ARIA Roles and Attributes
- Testing for Accessibility
- Designing for All Users

7 : Web Development Tools

- Text Editors and Integrated Development Environments (IDEs)
- Version Control with Git and GitHub
- Browser Developer Tools
- Debugging and Testing

8 : Advanced Topics

- CSS Preprocessors (e.g., Sass)
- JavaScript Basics
- Introduction to Content Management Systems (CMS)
- Web Hosting and Deployment

Total Credits: 01 T	Subject Code: BAE1T01
Teaching Scheme:	Examination Scheme:
Lectures: 1 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 15 Marks
Practical: 0 Hours/Week	University Assessment: 35 Marks

Course Objectives	
1	Basic knowledge of Communication Skills
2	Students would be able to enhance their communication skills.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Construct grammatically correct sentences.
2	Identify and overcome barriers of communication
3	Demonstrate good Listening and speaking skills.
4	Develop effective reading and writing skills.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I:			
Grammar: Tenses and its types, sentences and its Types, Transformation of Sentences (Assertive, Affirmative, Negative, Interrogative, Exclamatory) Reported speech	4		1
UNIT II:			
Introduction to Communication, Importance of communication Types of communication -Verbal and non-verbal Communications: - Kinesics, Vocalics, Chronemics, Haptics, Proxemics), Barriers to communication and methods to overcome them.	3		2
UNIT III:			
Introduction to LSRW Skills-, Listening Skills: Importance of listening, Types of listening, listening barriers and methods to overcome, Speaking Skills: Components of public speaking, Essential steps for public speaking, Overcoming stage fear in public speaking, Do's, and Don'ts of Public speaking	4		3
UNIT IV:			
Reading Skills: Importance of reading skills, Types of reading, comprehending passages, Writing Skills: Importance of effective writing, Paragraph writing, Email etiquettes.	3		4

List of Experiments: (Perform any 6 – 8 Practical)

- a. Barriers to Communication
- b. Non-verbal Communication
- c. Listening Skills
- d. Reading Skills
- e. Speaking Skills
- f. Presentation Skills
- g. Group Discussion
- h. Interview Techniques

Beyond/Additional Syllabus Experiments

- a. Development of Word Power
- b. Use of Figurative language

Suggested Textbooks/Reference Books/ Web page (URL)/Research paper, etc.

1. Technical Communication by Meenakshi Raman and Sangeeta Sharma, OUP
2. Public Speaking and Influencing Men in Business by Dale Carnegie
3. Professional Communication Skills by Bhatia and Sheikh, S. Chand Publications
4. Communication Skills by Lalita Bisen, Bhumi K. Agrawal, N. Theja Kalyani, Himalaya

SECOND SEMESTER B.Tech.**(Computer Science & Engineering/ Computer Engineering/ Information Technology/Computer Technology)****Mathematical foundation of Computer Science (TH+P)**

Total Credits: 03 T + 01 P	Subject Code: BIT2T05
Teaching Scheme:	Examination Scheme:
Lectures: 3 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives

1	Develop mathematical and logical thinking for enhancing computational power of the students.
2	Equipped the students with fundamental mathematical tools used in computer science.

Course Outcomes

After completion of syllabus, students would be able to	
1	Define mathematical structures, relations, functions and use them to model real life situations.
2	Apply the concept of sets & fuzzy logics in their computer domain.
3	Interpret the data in mathematical form
4	Analyze basic facts of algebraic structures.
5	Implement the concept of counting principles.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I: Relations and Functions			
Relations: Ordered pairs and n-tuples, Types of relations, Composite relation, Transitive closure of a relation, partially ordered set, Hasse diagrams. Functions: Definition, Composition of functions, Types of functions, Characteristics function and its properties.	8		1
UNIT II: Set Theory & Fuzzy Logic			
Sets: Review of sets, Types and operations on sets, Principle of mathematical induction, Fuzzy sets: Fuzzy sets and systems, Crisp set, Operations and combinations on Fuzzy sets, Relation between Crisp set and Fuzzy set, Fuzzy relations, Overview of Fuzzy logic and classical logic.	7		2
UNIT III: Curve Fitting			
Fitting of a Curve by Method of Least Squares: Straight line $y = a+bx$, Second degree parabola $y = a+bx+cx^2$ and curves of the type $y = ae^{bx}$, $y = ab^x$ and $y = ax^b$, Coefficient of correlation and Lines of regression, Rank correlation.	7		3

UNIT IV: Algebraic Structures			
Introduction, Algebraic Systems, Groups, properties of algebraic groups, Semi groups, Monoids, Subgroup. Lagrange's theorem, Cosets, Normal Subgroup, quotient group. Homomorphism, Isomorphism of semi groupmonoid.	8		4
UNIT V: Elementary Combinatorics	7		5
Basics of counting techniques, Pigeonhole principle, Definition of generating functions and examples, Recurrence relations: definitions & examples, Solving Linear Recurrence Relations, Inclusion and Exclusion principle.

Mathematical foundation of Computer Science using Python (PRACTICAL)

Total Credits: 01	Course Code: BIT2P05
Teaching Scheme:	Examination Scheme:
Practical: 02 Hours/Week	College Assessment: 25 Marks
	University Assessment: 25 Marks

Practical Course Objectives:

Solving problems using PYTHON Programming Language

Practical Course Outcomes:

After completing the practical course, students will be able to solve the following using PYTHON Programming Language.

CO1	Describe the components of a computer and notion of an algorithm.
CO2	Apply suitable programming constructs and built-in discrete mathematics to solve a problem.
CO3	Develop, document, and debug modular python
CO4	Use classes and objects in application on programs and visualize data

SR.NO	Title of Experiment/ Practical
1	Introduction to Python Programming
2	Basic Commands.
3	Functions, Relations & their Graphs.
4	Fitting of Straight line, parabola & exponential curve to the data
5	Coefficient of correlation
6	Recurrence Relation.
7	Lattices and Boolean Algebra.
8	Counting techniques
9	Student activity

Essential of Physic	
Total Credits: 03 T	Subject Cod: BIT2T06
Teaching Scheme:	Examination Scheme:
Lectures: 3 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 0 Hours/Week	University Assessment:70 Marks

Course Objectives	
1	To introduce ideas of quantum mechanics necessary to understand the function of quantum computing
2	To gain an understanding of the total internal reflection in optical communication system

Course Outcomes	
After completion of syllabus, students would be able to	
1	Learn the basic concepts of the dual nature of matter, differentiate between bits and qubits, and apply them to analyze various relevant phenomena in Quantum Computers and solve related numerical problems.
2	Relate the basic idea of total internal reflection to the propagation of light in an optical fiber and make use of the fiber concepts to solve numerical problems and relate to applications in engineering
3	Identify and explain different types of diodes, transistors, and their applications
4	Find how to extend the basic concepts of motion of charged particles in electric magnetic fields to solve numerical problems and to relate to applications in electron optic devices and CRO
5	Learn and explain nanoscience and its properties related to bulk materials

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I: <u>Quantum Computing</u>			
Introduction to bits and qubits. Difference in bits and qubits. Quantum entanglement, Brief introduction about quantum computers Concept of wave-particle duality, De-Broglie Hypothesis, Matter Waves, Davisson-Germer Experiment Concept of wave packets, Heisenberg Uncertainty Principle. Schrodinger wave equation (time dependent and time independent), Wave function Ψ , probability function, normalization condition, Eigen values, eigen function, Application to one dimensional infinite potential well.	7		1
UNIT II: <u>Optical fiber</u>			
Structure of optical fiber, total internal reflection, modes of propagation, Graded index profile, Numerical aperture, classification of optical fiber, Acceptance angle and cone, attenuation and dispersion, fiberoptic communication system.	7		2
UNIT III: <u>Semiconductor Physics</u>			
Classification of materials on the basis of band gap, conductivity, drift and diffusion current intrinsic and extrinsic semiconductors. Diode and	7		3

types of diodes: PN junction, Zener diode, LED, Tunnel diode, Photo diode, transistors, common base, common emitter configurations.			
UNIT IV: <u>Electron optics</u>			
Motion of electron in magnetic and electric field, Bethe's law, Electrostatic lens, Block diagram and functions of each part of CRT and CRO, trigger circuit, time base circuit applications of CRO	8		4
UNIT V: <u>Nanotechnology</u>			
Concept of nanotechnology, Top-down and bottom-up approach, comparison of properties of bulk and nanomaterials, sol gel and ball mill process, special types of materials, Zeolite and Graphene, applications of nanotechnology.	7		5

List of Experiments

1. Introduction to quantum computers.
2. Energy gap of semiconductor /thermistor.
3. Parameter extraction from V-I characteristics of PN junction diode.
4. Parameter extraction from V-I characteristics of Zener diode.
5. Parameter extraction from V-I characteristics of PNP/NPN transistor in CB and CE mode.
6. V-I Characteristics of Tunnel diode.
7. V-I Characteristics of Light Emitting Diodes/ Determination of Plank's constant by using LEDs.
8. Study of Diode rectification.
9. Study of Hall Effect and determination of Hall Voltage of given sample.
10. Variation of Hall coefficient (R_H) with temperature.
11. To study B-H curve and to find out the values of coercivity, retentivity and saturation magnetization of experimental material.
12. Determination of NA for optical fiber
13. Calibration of Time Base circuit of CRO and determination of AC , DC voltage & frequency of electrical signals using CRO.
14. To determine the number of lines per cm on a diffraction grating using LASER beam.
- 15.Virtual Lab: Experiment on the determination of the thickness of a thin foil using an air wedge arrangement.
- 16.Virtual Lab: Experiment on the determination of the refractive indices of the material corresponding to ordinary and extra - ordinary rays.

Note: Performance of at least **six** experiments is compulsory in a semester.

Python Programming	
Total Credits: 03	Subject Code: BIT2T07
Teaching Scheme:	Examination Scheme:
Lectures: 3 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 02 Hours/Week	University Assessment: 70 Marks

Course Objectives	
1	This course is aimed at offering the fundamental concepts of Python scripting language to the students. It starts with the basics of Python programming and deals with lists, dictionaries, functions, exceptions and files.
2	The objective of this course is to enable the students to develop the applications using the concepts of Python.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Understand the basic terminology used in computer programming to write, compile and debug programs in Python programming language.
2	Use different data types to design programs involving decisions, loops, and functions.
3	Handle the exceptions which are raised during the execution of Python scripts.
4	Handle data using tuples and dictionaries
5	Implement files and classes in the Python programming environment.

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I : INSTALLATION, DATA TYPES AND INPUT/OUTPUT:			
Importance of Python, Installing Python in Windows & Ubuntu, Executing Python programs, Comments in Python, Internal working of Python, Python character set, Tokens, Python Core Data Types, The print () function, Assignment of values to variables, The input() function, The eval() function.	7		1
UNIT II : OPERATORS AND CONTROL STATEMENTS			
Operators- Arithmetic Operators, Operator precedence and Associativity, Bitwise operator, The compound assignment operator; Decision statements- Boolean operators, Boolean Expressions and Relational operators, Decision making statements; Loop Control Statements-while loop, range() function, for loop; break statement, continue statement	7		2
UNIT III: FUNCTIONS AND LISTS			
Functions- Syntax and basics of a function, Use of a function, Parameters and arguments in a function, the local and global scope of a variable, The return statement, Recursive functions, The lambda function; Lists-Creating Lists, Accessing the elements of a List, List slicing, Python in-built	7		3

functions for lists, List Comprehension, List Methods, Passing list to a function, Returning a list to function.			
UNIT IV: TUPLES, SETS AND DICTIONARIES			
Tuples - Creating tuples, tuple() function, Inbuilt functions for tuples, Indexing and Slicing, Operations on tuples, Passing variable length arguments to tuples, Sort tuples, Traverse tuples from a list, The zip() function, The Inverse zip(*) function; Sets - Creating sets, The set in and not in operator, The Python Set Class, Set operations; Dictionaries -Basics of Dictionaries, Creating a Dictionary, Adding and replacing values, Retrieving values, Formatting dictionaries, Deleting items, Comparing two dictionaries, Methods of dictionary class, Traversing dictionaries, Nested dictionaries, Traversing nested dictionaries.	8		4
UNIT V: FILES			
File Handling-Opening a file, Writing Text, Closing files, Writing numbers to a file, Reading Text, Reading numbers from a file, Appending data, seek() function	7		5

Total Credits: 02 T	Subject Code: BIT2T08
Teaching Scheme:	Examination Scheme:
Lectures: 2 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 30 Marks
Practical: 0 Hours/Week	University Assessment: 70 Marks

Course Objectives

1	Aims to understand basic architecture of computers and data representation on it
2	Teach memory and IO operations and devices.

Course Outcomes

After completion of syllabus, students would be able to

1	Understand basic functional blocks of computer
2	Represent data using different methods
3	Understand memory read, write policies
4	Understand I/O and roles

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I:			
Basic functional blocks of a computer: CPU, memory, input-output subsystems, control unit. Instruction set architecture of a CPU - registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Case study - instruction sets of some common CPUs.	6		1
UNIT II:			
Data representation: signed number representation, fixed and floating-point representations, character representation. Computer arithmetic - integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication - shift-and-add, Booth multiplier, carry save multiplier, etc. Division - non-restoring and restoring techniques, floating point arithmetic.	6		2
UNIT III:			
Memory organization: Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs block size, mapping functions, replacement algorithms, write policy	6		3
UNIT IV:			
Peripheral devices and their characteristics: Input-output subsystems, I/O transfers - program controlled, interrupt driven and DMA, privileged and non-privileged instructions, software interrupts and exceptions. Programs and processes - role of interrupts in process state transitions.	6		4

Linux and Shell Programming	
Total Credits: 02	Subject Code: BSE2P01
Teaching Scheme:	Examination Scheme:
Lectures: 0 Hours/Week	Duration of University Exam: 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 50 Marks
Practical: 04 Hours/Week	University Assessment:50 Marks

- Learn Linux Commands required to execute below practical list
- Write a shell script to reverse a number
- Write a shell script to write your user name as banner & print it on the screen.
- Write a shell script called is_dirs which just lists the directories in the current directory
- Write a shell script called see taking a file name, as arguments which uses is, if the file is a directory & more if file is otherwise
- Write a shell script, using command cp, which over writes a file or copies a file.
- Write a shell script that asks a user to type a word, in, then tells the user how long that word is.
- Write a shell script which appends line to the file. Both the file name and line name have to be specified to the script at the command line. Ensure that it runs the sh. shell script. Print the no of lines after you are done.
- Write a shell script that gives person's UID, tell you how many times that person has logged in.
- Write a shell script that takes UID as argument prints out the person's names, directory name, shell & group & other that person may belong to.
- Write a shell script that for mail merging. facility.

****This is recommended list, to be changed every year by subject teacher**

Consciousness Studies	
Total Credits: 02	Subject Code : BIK2T01A
Teaching Scheme :	Examination Scheme :
Lectures: 0 Hours/Week	Duration of University Exam : 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 100 Marks
Practical: 04 Hours/Week	University Assessment:--Marks

Course Objectives	
1	This course aims to focus on psychology, sensory processes and perception
2	Application of classical conditioning and understand behavior of mind.

Course Outcomes	
After completion of syllabus, students would be able to	
1	Analyze the basics of Psychology and its applications
2	Develop knowledge about the sensory processes and perception
3	Apply various theories of classical conditioning
4	Integrate the theories of memory and behaviour of mind

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I :			
An introduction to Psychology Introduction to Psychology, Definition of psychology, history, methods in Psychology, Subfields of Psychology and its applications	6		1
UNIT II :			
Basic Cognitive Processes Sensory processes-general characteristics of senses, visual sense, auditory sense, other senses Perceptual organization-principles of perceptual organization, object perception and perceptual constancies, influences upon perception, extrasensory perception	6		2
UNIT III :			
Classical conditioning, theories about classical conditioning, Reinforcement and Punishment	6		3
UNIT IV :			
Theories about memory, brain and memory, long term memory, forgetting	6		4

Preserving Art, Culture and Tradition	
Total Credits: 02	Subject Code : BIK2T01B
Teaching Scheme :	Examination Scheme :
Lectures: 0 Hours/Week	Duration of University Exam : 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 100 Marks
Practical: 04 Hours/Week	University Assessment:--Marks

Course Objectives	
1	To provide overview of Indian Knowledge System (IKS)
2	Sensitize the students to the contributions made by Indians in the field of philosophy, art and health.
Course Outcomes	
After completion of syllabus, students would be able to	
1	Interpret basics of Indian Knowledge system.
2	Integrate the teaching of Indian culture and civilization
3	Appreciate Indian artistic tradition.
4	Analyze Indian health and wellness system for healthy living

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I :			
Introduction to Indian Knowledge System Introduction and overview of Indian Knowledge system, The Vedic Corpus -Vedas, Types of Vedas, Upavedas, Types of Upavedas	6		1
UNIT II :			
Indian Culture and Civilization Indian culture and Civilization: its characteristics, Difference between Culture and Civilization, Indus valley civilization, Vedic civilization.	6		2
UNIT III :			
Indian Artistic Tradition, Indian Artistic tradition: Chitrakala- Indian style painting (Madhubani, Warli, Phad, Kalamkari, Gond, Mandana), Nritya : Indian dance forms (Bharatnatyam, Kathak, Kathakali, Kuchipudi, Manipuri, Mohiniattam) Sangeet- Carnatic music & Hindustani music	6		3
UNIT IV :			
Health and Wellness, Well being: Mental & Physical, Dimensions of Wellness, Concept of healthy living in Ayurveda, Tri-doshas – Relationship to Health	6		4

Wellness, traditional medicines and yoga	
Total Credits: 02	Subject Code : BIK2T01C
Teaching Scheme :	Examination Scheme :
Lectures: 0 Hours/Week	Duration of University Exam : 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 100 Marks
Practical: 04 Hours/Week	University Assessment:--Marks

Wellness, traditional medicines and yoga	
Total Credits: 02	Subject Code : BIK2T01C
Teaching Scheme :	Examination Scheme :
Lectures: 0 Hours/Week	Duration of University Exam : 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 100 Marks
Practical: 04 Hours/Week	University Assessment:--Marks

Course Objective:

The course will enable engineering students to acquire the knowledge of richness of healthy lifestyle and strong heritage of yoga and Vedas in Indian traditional system.

Course Outcomes:

On successful completion of the course, the students will able to:

CO1: Understand the importance of a healthy lifestyle

CO2: Familiarize to manage stress and health consciousness about physical and mental health.

CO3: Appreciate the benefits of yoga and medicinal plant.

CO4: Identify the social changes in Indian society.

Unit1: Importance of health and wellness, Essential components of balanced diet for healthy living, Processed foods and unhealthy eating habits.

Unit 2:

Body systems and common diseases, Sedentary lifestyle and its risk of disease, Stress, anxiety, and depression, Factors affecting mental health.

Unit 3:

Importance and benefits of yoga, Purpose of yoga, traditional knowledge of medicinal plant, use of home available herbs and spices.

Unit 4:

Vedas and it types, Social change in Indian society, Social stratification and class conflicts.

Glimpses of ancient Science and Technology	
Total Credits: 02	Subject Code : BIK2T01C
Teaching Scheme :	Examination Scheme :
Lectures: 0 Hours/Week	Duration of University Exam : 03 Hrs.
Tutorials: 0 Hours/Week	College Assessment: 100 Marks
Practical: 04 Hours/Week	University Assessment:--Marks

Course Objectives	
1	To provide the students with scientific foundation of Ancient Indian Knowledge System
2	To create awareness about scientific heritage of the ancient civilization

Course Outcomes	
After completion of syllabus, students would be able to	
1	To understand about great mathematicians and to help students to trace, identify, practice, and develop the significant Indian mathematics
2	To understand the concept of motion and its application in Indian ancient physics literature.
3	To understand the concepts of basic chemical & metallurgical process of ancient and medieval India.
4	

SYLLABUS

Details of Topic	Allotment of Hours		Mapped with CO Number
	L	T/A	CO
UNIT I :			
Mathematics in India: Introduction of inception of Mathematics from vedic periods. Great Mathematician and their contribution (e.g. Arytabhatta, Bhaskara, Brahmagupta, Ramanujan, Pingala, Bhaskara-II), Sulbhasutras (Pythagoras theorem), Square, Square root, Square root of imperfect Squares, Magic Squares, Value of Pi.	8		1
UNIT II :			
India: Vaisheshikadarshan Atomic theory & law of motion, theory of Panchmahabhoota, BrihathShathaka (divisions of the time, unit of distance), Bhaskaracharya (Introduction to theory of Gravity, Suryasiddhanta&Sidhantashriomani), Lilavati (Gurutvakashan Shakti).	8		2
UNIT III :			
Chemistry in India: Vatsyayana, Nagarjuna, Vagbhata –building of Theras-Shala (laboratory), working arrangements of Ras-Shala, material and equipment, YaśodharaBhaṭṭa-process of distillation, apparatus. Metallurgy in India: Survarṇa(gold) and its different types, properties, Rajata(silver), Tamra(copper), Loha(iron), Jasta(zinc), Naga /Sisa(lead), Pittala(brass).	8		3
